All About ChatGPT

You may have heard of ChatGPT, an open AI that has been taking the world by storm. This advanced AI chatbot goes beyond the chatbots from the AOL days. ChatGPT can hold conversations, keep responses in context with the current conversation, while pulling in new information from the world wide web. The AI is so advanced, it can write novels, research papers, computer programs, and more without the assistance of a human. ChatGPT can also admit its mistakes while challenging incorrect premises.

What is MFA? What about 2FA? MFA stands for multifactor authentication and 2FA is a type of MFA. 2FA stands for two-factor authentication. Factors are ways to verify you are who you say you are. Usually, the factor is your password. So, what is the second factor? The second factor can be a variety of things like a time-based code generated from an app such as Google Authenticator. It could also be a code sent via text message to your cellphone. But why is it important? Let's say an attacker gets ahold of your username and password; they could log right into your account! With 2FA though, the attacker would need your second factor, which is incredibly difficult to get. An attacker usually can only obtain your 2FA code through social engineering. Other second factors you could use are biometric scans, like fingerprint scans.

Top 5 Ways to Keep your Computer Safe

1. Managed Anti-Malware
2. Regular Operating System Updates
3. Change Default Passwords / Set PWs
4. Safe Search Browser Extensions
5. Software from Trusted Vendors

We can securely backup all your files for you!

ONECLICKFIX

WE DO ONSITES OR REMOTES
24/7 / 365

We're there when you need us - onsite or by remote - highly skilled, friendly service that gets it done. We take care of your servers, desktops, laptops, network, internet, and more. Addressing small problems before they become issues. And if your internet goes down, we address it immediately.

ENTERPRISE CIO SERVICES

Have an issue? Let us know, instantly, through our email ticketing system or helpdesk phone. We can also receive alerts regarding your various systems in real time. Not only can you treat us just like an internal IT department, but we can act as your CIO. We provide vision and oversight for your IT - making sure you're using it as a competitive advantage, ensuring your projects stay on budget, and helping you become compliant with industry regulations.

CYBER SECURITY & DISASTER RECOVERY

We make sure that your network is secure form hackers and breaches - and that your computers and users aren't susceptible to viruses, malware, and other cyber threats. From designing a simple server backup to creating a comprehensive business continuity plan, our technicians are experts in data security. They'll keep your data safe from loss, theft, hackers, and inevitable zombie apocalypse.
